

Floods

BEFORE hiring a company and starting the work, make sure that:

- ☑ **The professional cleaning company is registered with the Régie du bâtiment du Québec?**
- ☑ **The employees are well protected and wear gloves, masks, boots and coveralls.**
- ☑ **Workers are the only ones who have access to the work zones.**
- ☑ **Work zones are isolated from the rest of the house.**
These zones should be well ventilated to make sure the air is vented outside. Mould releases allergens and particles that cause irritation. When the air is vented outside, occupants are less likely to be exposed and the particles don't get blown into other areas of the house.

Biocides don't get rid of mould.

Testing the air is not recommended and is an unnecessary expense.

➔ **For more information, see the [Protect Yourself From Mould](#) document.**
